Module Installation

Installing the module is simple, it is to download and send the module zip file containing all files.

Download

Download

To download the module, log on to the marketplace where you have made purchase

- **Prestashop Addons**
- If you ordered on PrestaShop Addons log on <http://addons.prestashop.com/> then in the downloads section. To have a more frequent version you can go to the <http://labulle.net/addons-customers/> page and enter your order information.
- **laBulle**
- If you ordered on laBulle.net login to <https://labulle.net/my-account/>, find the module and click the 'Download' button, a ? you possibly indicate the changes.

Version

For version 1.4 of Prestashop only 2.x version of the module is usable, version 3 is compatible with PS 1.5 to 1.6.

Install

Requirements

To run properly some files need to be copied to “override” folder of Prestashop. For that, write rights must be added for “everybody” on that folder with your FTP client or by taping the following command by SSH from the Prestashop folder : “`chmod 777 -r override`”.

Upload

To download the module on PrestaShop Addons your shop there are two methods:

- **admin**
- Through module admin on back-office : Just select the zip file that has been placed at your disposal
- **ftp**
- Through a FTP client : Unzip the module and drop the folder « myOwnReservations » in the folder /modules/ on the Prestashop folder on your web server.

Install

Once sent the module appears in the list of modules. Just click on the Install button.

Registration

To enable the module registration of a license key is required, otherwise the front office part is disabled.

To get a key log onto your account www.labulle.net to generate it for your domain name. If you not already have an account fill the form at <http://labulle.fr/clients-addons/> with your Prestashop Addons invoice.

Local use

If you are on a test server running locally (IP 192.169.0.X or 127.0.0.1, host localhost) then it is not necessary to indicate a key for the front office to display

Test

You will be able to change your license key only if it contains "test." otherwise indicate us your domain name so that we generate you another license key by email.

Update

To get the latest updates connect to your account on labulle.net

Requirements

Before updating the module it is strongly advised to make a backup of the database and files.

Especially think to save your modified templates or move them in the /themes//modules/myownreservations/templates/

To update the addon :

- 1 send the last version using module upload menu in the back-office without uninstalling the older version.
- 2 next check that any update has to be confirmed in the module configuration
- 3 delete the cache if you're on Prestashop 1.4 or earlier
- 4 delete the file cache/class_index.php if you're on Prestashop 1.6.

Working on Front

This section describes the control process with reservation including the planning.

Selection

It is not possible to add a product reservation directly to the cart, for booked products selection planning must be used. This part will explain how it works and color codes.

The administration schedule is accessible from the Administration tab by configuring the module or via the menu Orders > myOwnReservations

There are two ways to place a reservation for a client:

Go to product page directly and make his selection in his schedule and click add to cart that is active as soon as the end of the period is entered.

It is also possible to use the selection widget that allows record the time of booking and let's view only the available products.

The periods bookings are displayed below as product customization.

Selection

Color codes of periods

- **Active periods**
- The schedule allows you to place a reservation in the time window that was configured outside this period and on the days / slots off the boxes are white. Wherever possible, these periods are filtered for easier navigation.
- **Disabled periods**
- The schedule takes into account the reservations validated to allow the customer to choose only an available period. Available periods are shown in green and unavailable periods in gray.
- The days available can be deactivated when the same because they cannot bind to a reservation which met minimum.
- **Unavailable periods**
- Availability is displayed on a gray background hatched. A reservation can be allowed to run over the end of selection if available. Gray periods may be added before or after what is logical in the case of a minimum period.
- **Booked periods**
- A booking in a basket is only taken into account for the reservation of the same client. If a basket is transformed, in order, with the status of those who validate the reservation, the reservation is then considered for other customers. If a reservation in a basket is no longer valid (because it's no more in the booking window, that an unavailability was added or that another client was faster) so she and removed with its product and a message tells the customer about the unavailability.

Steps

The selection is made in stages according to the length option of booking rules.

If the duration is fixed (even with a value larger than 1) then the module will know the end date and offers directly different periods with the final price.

With a fixed time you can select the option 'multiple selection' from which allow to choose several boxes of planning and therefore different periods simultaneously (following periods are grouped).

However if the duration is variable then customer chooses first start date and valid to refresh the planning on the choice of the end date.

If the schedule is on views per month with more than 3 slots, then first select the day to be able to choose the time slot.

Widgets

This part explain how the basket is changed when reservations are added.

Position

You can display the widget on multiple locations. Don't forget to activate them from module configuration and arrange them from module>position menu of Prestashop

- **Home**
- You can display the widget on home page, it is composed by 2 date selector for start and end (only one if length is fixed). To go faster the earlier start date are displayed depending on category selected and corresponding price rule.
- **columns**
- The column widget display the planning in 2 steps : the start then the end depending on current category and it's reservation rule.

Select

There is two kind of columns widgets

- **Select**

- The selection mode allows a widget with a mini schedule that allows to enforce constraints booking rules. This widget lets you select the product category (the current one is selected).
- With version PRO the category change also allows to have the rules applied in the selected category. If the displayed category depends upon the product family for which the selection was made, then the selected period is highlighted, and the list of products are filtered according to their availability.
- **Search**
- The search mode is less restrictive because it offers a search field and two fields of dates without constraint. In addition, the period is not recorded so availability are only displayed for the search results.

Search

The search mode is less restrictive because it offers a search field and two fields of dates without constraint. In addition, the period is not recorded so availability are only displayed for the search results.

Category

You can add a category choice selector in you select multiple same level categories instead of choosing home in reservation rules

Home

It is possible to activate from the configuration a tab of the products available on the homepage

Products

The screenshot displays a fashion e-commerce homepage. At the top, there is a banner for the 'SOMMER COLLECTION' with a '45% OFF' discount. Below the banner, there are navigation tabs: 'POPULAR', 'BEST SELLERS', 'SPECIALS', and 'AVAILABILITIES' (which is currently selected). The main content area shows a calendar view of product availability for the week of February 27 to March 5, 2017. The calendar is organized into columns for each day. Each cell in the calendar contains a small image of a dress and a label indicating the product type and its availability status. For example, on Feb 27, there are three dresses: 'Robe imprimée', 'Robe d'été imprimée', and 'Robe en mousseline imprimée'. On Feb 28, there are two dresses: 'Robe imprimée' and 'Robe en mousseline imprimée'. On Mar 1, there are three dresses: 'Robe imprimée', 'Robe d'été imprimée', and 'Robe en mousseline imprimée'. On Mar 2, there are three dresses: 'Robe imprimée', 'Robe imprimée', and 'Robe d'été imprimée'. On Mar 3, there are two dresses: 'Robe imprimée' and 'Robe d'été imprimée'. On Mar 4, there are three dresses: 'Robe imprimée', 'Robe d'été imprimée', and 'Robe en mousseline imprimée'. On Mar 5, there are three dresses: 'Robe imprimée', 'Robe d'été imprimée', and 'Robe en mousseline imprimée'.

- **Help**
- This mode "Availability by product" displays each product and its schedule with quantity available. It is not possible to make reservation, since this table but only to go to the products.

Products list

The screenshot displays a web interface for a clothing store. On the left, there is a 'RESERVATION' section with a date range from July 8 to July 16, 2015, and a calendar view. Below this is a filter sidebar with options for Taille (S, M, L), Couleur (Blanc, Orange, Vert, Noir, Bleu, Jaune), Compositions (Polyester, Viscose), Styles (Décontracté, Féminin), and Propriétés (Maxi-robe, Robe courte, Robe midi). The main content area features a banner for 'Robes d'été' with a woman in a floral dress. Below the banner, there is a section titled 'ROBES D'ÉTÉ' showing 3 products. The first product is a 'Robe d'été imprimée' priced at 29,78 € (20,78 € -5%). The second product is another 'Robe d'été imprimée' priced at 31,60 €. The third product is a 'Robe en mousseline imprimée' priced at 14,68 € (14,68 € -20%). Each product has an 'Add to cart' button and a 'More' button. A 'Compare (0)' button is also present. The interface is in French.

By default the module displays all reservation products but removes the add to cart button and add the time unit after the product price.

If a period has been selected with the widget then product availability is displayed and product price is updated for the whole period. From the configuration you can choose to hide products that are not available due to availabilities or validated reservations.

Cart

This section explains how the cart is changed when reservations are added.

The unit price of the reservation, is taking into account the cart or catalog rules but not module price rules.

You can change the amount of the reservation from the cart as long as the occupation of the product allows, otherwise an error message indicates that there is more available quantity. If the deposit is configured a line after the product indicates the amount of the advance on products (including products for sale).

If security is configured gift packaging line is used to indicate and charge the amount of the bond, but the bond can also be displayed for information.

Popup

Reservations that are in the customer cart are verified at all times and can be removed from cart

- **Delay**
- The minimum delay between the order and reservations start has ended. It's useful when a abandoned cart is restored when a old customer came back
- **Unavailabilities**
- An unavailabilities has been added.
- **reservations**
- A reservation has been placed by another customer and validated. Indeed there is no validity time for a reservation the first customer that pays it has a validation done

At the end of the ordering process whether notifications are checked, they are displayed and offer downloading iCal file for example. Reservations (their dates and status) will subsequently confirmed in email summary of the order, the invoice details of the order from its customer account.

Module configuration

To configure the module must primarily take care of the reservation rules, we can also add unavailability and pricing rules for special cases.

Reservation Rules

Informations

This section let you select products and how they are occupied by reservations.

The screenshot shows the 'myOwnReservations PRO' configuration interface for 'Reservation rule #2'. The interface is divided into several sections:

- Header:** Includes navigation links (Save, Return to list, Delete, Save and stay, Help) and the 'labulle.net' logo.
- Left Sidebar:** Contains 'Informations' (Planification, Payment, Notification) and a list of configuration tabs: Reservation rules, Time slots, Availabilities, Price rules, Configuration (active), Stock, and Administration.
- Main Content Area:**
 - Name:** 'Dresses'.
 - Admins:** A text input field with a note: '(Select users that will be able to manage these products reservations)'.
 - PRODUCTS SELECTION:**
 - Products:** A list of products including 'T-shirt délavé à manches courtes', 'Chemisier', 'Robe imprimée', 'Robe imprimée', 'Robe d'été imprimée', 'Robe d'été imprimée', 'Robe en mousseline imprimée', and 'text'.
 - Categories:** A section for 'Reservation categories' with buttons for 'Collapse All', 'Expand All', 'Check All', 'Uncheck All', and a search bar. A checkbox for 'Accueil' is also present.
 - PRODUCT OCCUPATION:**
 - Product kind:** Includes 'Real product' (with 'Purchase' button and 'Also enable purchase of these products' checkbox), 'Intangible product' (with 'Product quantity' button and radio buttons for 'Ignore', 'Check combinations sum', and 'Check default combination'), 'Stock element' (with a note to enter stock elements in administration), 'Mutual products' (with 'Occupation' button and a note to allow out of stock orders), 'Shared product' (with 'Capacity' button and a note to allow multiple reservations), and 'Variable product' (with a note to enter available quantity in availabilities).
 - QUANTITY:**
 - Reservation quantity:** Includes 'Product quantity' (selected), 'Fixed' (with 'Quantity' input and 'Search' button), and 'Search in attributes' (with 'Search' button and 'Couleur' input).
 - Show available quantity on planning:** A toggle switch currently set to 'Yes'.

Products

Select products that will become automatically reservable by customers. You can select multiple products (by pressing 'ctrl' key) and or categories.

Warning children categories are included and a product cannot belong to multiple product families.

- **Name**
- This name is not shown to the customer
- **Administration**
- Select the users who are allowed to view reservations. To manage finely rights on delete and modification configure the permissions for tab "My bookings".
- **Products**
- Select multiple products by pressing cmd or ctrl key.
- **Category**
- Select one or more categories. Needless to check child categories your selection.

Occupation

With reservations there is no stock movement at order (a rented product remains in stock). So tell the module how to get the products quantities and how they are occupied by reservations.

- **Real product**
- This is the default occupation, product is considered as a real product. So product quantity determines the amount of reservations that can be done at same time.
- Purchase: You can enable both reservation and purchase for the same product. In this case you must also set the unit price of the product that will be the reservation price, otherwise the purchase of the product won't be enable. If the product have some variations their reservation price will be the product variation price divided by the ratio (the ratio is product price divided by the unit price).
- **Intangible product**
- The product is considered as intangible, that means that combinations are not real like size or color but combinations concern options or features that don't affect occupation. In this case you have to select how to get product quantity whatever combination selected.
- Quantity: This option allows you to ignore the amount of variations and use the amount of the entire stock of the product (by getting sum of each combination or the default combination quantity).
- **Variable product**
- You cannot set product quantity because it depends on when. Then set this option to indicate product quantity when creating availabilities for this family.
- **Stock element**

- Instead of working with a quantity, you can list all products with a unique identifier in stock tab. If no stock element is found then classic product quantity is used.
- **Mutual products**
- Select this option only if each one of your product can handle more than one reservations per product quantity. If reservation quantity is greater than specified capacity then another product will be occupied.
- Occupation: Set here the maximum number of reservations for all products.
- **Shared product**
- Reservations are shared over products of the family, that means if a product is occupied on a period then other products of the families are occupied at same time.
- Capacity: You can set here the quantity of reservation that a product can handle, by default the capacity is 1. If you set a capacity greater than 1 you must allow the order without stock to the products of the family.

Quantity

You can choose other way to get reservation quantity than the classic product quantity field on front.

- **Product quantity**
- This is the default behavior, the product quantity field is used as reservation quantity.
- **Fixed**
- Check this to ignore product quantity filled by customer to use a custom fixed quantity.
- **Search in attributes**
- Select this option if one of your attributes contains a numeric value to use as quantity, the remaining product quantity is used as number of reservations.

Planification

Here you can select the time unit of customer selection and kind of planning. You can also set length restrictions.

myOwnReservations v3.2

Reservations rules

CUSTOMER CHOICE

Selection unit: ☐ A time slot (With a specific start and end time) ☐ **A day** (End time must be later than start time) ☐ A week (Can be over 2 calendar weeks) ☐ A month (With a specific day for start and end)

Selection options: ☐ Display Time

FRONT PLANNING

Start: View type: ☒ Per week ☐ Per 2 weeks ☐ Per month

☒ Allow reservation on a current time slot

Length:

SELECTION LENGTH

Length options: Range From: to

Length Unit:

☐ Fixed for all products ☐ Fixed for each product

☐ Including ☐ Holidays periods ☐ Disabled days

ADVANCED OPTIONS

☒ Allow to run over ☒ Holidays periods ☒ Disabled days

Length between reservations:

Behaviour: ☐ Show "from" price on reservation start selection

Frequency: ☐ Strict length

Payment

Select minimum period that the customer will select. And also parameters that allow selectable period to be generated recurrently.

- **A time slot**
- Select global slots or create specific slots from dedicated tab
- Cut time: Check to cut the hours of the day in order to display time slots in proportion to their length
- **A day**
- Choose at least one day of week available for selection, if you don't choose week-end days they would be hidden on calendar.
- **A week**
- Choose the day of week that will be used to get the start and end reservation date of the week.

- **A month**
- You can choose first and end day of week that will be used to get the start and end reservation date. You can also choose the exact day number of the month.
- Times: The start time must be later than the end time except for one selection per night

Planning

Indicate reservation boundaries (period within customer can select a reservation) and the planning shape.

- **Start**
- This option allows you to choose when the reservation start. Select "the current day" so that reservation can be made the day of order, in which case you must specify whether the reservations can be made during the current slot, otherwise the reservations will only be possible on the next time slot. Select "After a few days" so that reservations can be made one or more days after the date of the order, in this case you need to specify the number of days in period (1 for next day, 2 for on-day etc. ..). Select "next week" so that reservations are only possible one week to the next (if the current week is started, the booking will only be possible from the beginning of the following week). In this case you can change the day and time of the start of the week. Select "After a few weeks" so that reservations can be made a week or more after the date of the order, in this case you must specify the number of weeks of delay.
- **Length**
- These option let you set which planning is show during the time slot selection on checkout.
- **Period**
- This option let you chose the reservation period in days. For instance if the reservation start is set to 1 day after and the reservation period is set to 2, the customer can select a reservation during the two next days. If this parameter is set to 0, the reservations are available until the end of start day.

Length

By selecting length limits you're changing the way customer make his selection. Warning this length can include days that are not included for price.

- **No length**
- The reservation will have no end date. The length will be 1 so the reservation price will be the product price.
- **Unlimited**
- The customer can select a end, until the end of the reservation window.
- **Limited in a range**

- You must choose the minimum and maximum reservation (above 0). The reservation duration max is limited by the length of the reservation window.
- **Fixed for all products**
- Indicate the reservation duration , the client will only have to select the start date and will be able to add his reservation to the cart.
- **Fixed for each product**
- You can set a distinct length for each product from the administration of them in myOwnReservation tab.
- **Optional length**
- The customer can choose only one time for start or for end or both, this is useful for deposit/collection or going/coming selection.

Time slots

Configure time slots of the product family.

Time Slot

Select common time slots available for product family, disabled time slots are allocated to another product family or assigned to the current product family.

Payment

Choose the way reservation price is calculated and global payment options.

The screenshot shows the 'myOwnReservations' administration interface. The top navigation bar includes 'Catalogue', 'Règles de réservation', 'Reservations rules', 'Availabilities', 'Price rules', 'Configuration', and 'Administration'. The 'Reservations rules' section is active. The main content area is divided into three sections:

- RESERVATION PRICE:** This section allows configuring how the reservation price is calculated. It includes options for 'Length kind', 'Price options', and 'Price Unit'. The 'Table Rates by length' option is selected. Other options include 'Product price for reservation', 'Product price by length', and 'Table Rates by period'. There are also checkboxes for 'Including' (Holidays periods, Disabled days) and 'Exclude' (Count number of day used instead of the length, Exclude end day).
- PAYMENT:** This section allows configuring payment options. It includes fields for 'Advance' (%, TOC) and 'Deposit' (€). There is also a 'Calculation' dropdown set to 'Apply once'.
- VALIDATION:** This section allows configuring the validation status. It includes a 'Statuses' dropdown with options: 'En attente de paiement par chèque', 'Paiement accepté', 'En cours de préparation', and 'Expédié'. A note at the bottom states: '(Select multiple order statuses (by keeping ctrl key pushed) that will validate the reservation, others will be unvalidate)'.

Price

Indicate how is calculated base price of the reservation (before price rules). By default the product price is multiplied by the duration of the reservation. It is possible to use a table from product administration if reservation duration is limited to a range.

Payment

Fill in the amount of advance, fixed or in percentage of the booking amount. Specify whether a deposit is requested and how it is calculated. Please note that advance will be 100% if your IP is in maintenance.

Validation

This option allows you to choose for which steps of the order the booking is validated. Press the "Control" key on your keyboard (or "cmd" on a Mac) to select multiple statuses. A reservation in awaiting validation is not taken into account in the calculation of availabilities. Warning also selecting the "pending payment ..." products may not be available when reservations are not paid.

Notification

Check available communication channel to send notification of reservations.

The screenshot shows the 'myOwnReservations' web interface. The top navigation bar includes 'Catalogue' and 'Règles de réservation' (Reservations rules). The main navigation bar features 'myOwnReservations', 'Reservation rules', 'Availabilities', 'Price rules', 'Configuration', and 'Administration'. The left sidebar lists 'Informations', 'Planification', 'Payment', and 'Notification' (selected). The 'NOTIFICATIONS' section contains four items: 1. 'Order details e-mail' with an email field containing 'patrice.faued@gmail.com'. 2. 'iCalendar object' with a dropdown for 'Email on status' set to 'Payment accepted' and a checkbox for 'Publish product family reservations as an' with a 'Change selection' button. 3. 'RSS Feed' with a checkbox and description 'Publish all incoming reservations of customer on a feed'. 4. 'SMS Alert' with a checkbox, description 'Send a programmed SMS before reservation begin', and a 'Cost' field with a currency symbol and a numeric input.

E-mail

Set an email associated to the product family, this email will receive reservation notification. An admin account with the same email will be restricted to this product family on reservation administration. You can indicate multiple email addresses separated by a ;

iCalendar

You can specify the url in the salt parameter to change the period. Ex "-3 months" for bookings last 3 months, "three months" for the next three months.

RSS Feed

An RSS feed is available to customers in the order confirmation. With with as reference a customer order number passed in the link provided, it receives all his upcoming reservations (and those of other commands).

SMS

You can allow SMS reminder sending before the reservation, if you provided your SMS account in the module configuration.

Time Slots

The time slot is a period during which a customer can reserve a product. You can create as many time slots that you want but the end time or start time of a time slot cannot be included between the start time and the end time of another time slot.

ID	Name	Product	Start	End	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Actions

Details

- **Name**
- cannot be empty and must be smaller than 10 chars. The name is show when a customer select a time slot.
- **Product**
- You can assign a product to a time slot that allow you to set overlapping time slots.
- **Times**
- Time slots must be uniques and disjoint. That means that a time slot can't begin or end in another timeslot, and that also means that a time

slot can't begin before a time slot and end after the same time slot. However a time slot can begin at the same time that the end of another time slot. 12:00 am is considered as the begin of the day when it is used as the start time, and it is considered as the end of the day when it is used as the end time.

- **Type**
- You can force a time slot to be visible only for reservation start or end, that can help you to limit the customer choice and increase your time slots occupation.
- **Days**
- Check the days for which time slot would be available in each week

Availabilities

You can specify the period of availability for your products, prefer the use of time slots for recurrent availability. By default a product is available with the basic rules, there is no need to add more. If you create an availability for a product, it will be considered unavailable all the time except for the availability periods indicated.

ID	Type	Family	Product	Attribute	Start date	End date	Delete
2	Available	Dresses	All	All	Wednesday July 1, 2015	Friday July 31, 2015	<input type="radio"/>
3	Available	Shirts	All	All	Monday June 1, 2015	Monday August 31, 2015	<input type="radio"/>
4	Unavailable	Shirts	Chemiser	All	Monday July 13, 2015	Sunday July 19, 2015	<input type="radio"/>
5	Unavailable	All	All	All	Tuesday July 14, 2015	Tuesday July 14, 2015	<input type="radio"/>

You can create and manage availabilities from the Modules menu > myOwnReservations | Configuration and then in tab Availabilities tab. Press the + button at the top or from the top right corner of the table to create a new availability. It is also possible to do it from the product administration.

Types

- **Unavailability**
- Unavailability can make the product unavailable regardless of the amount of product in stock. There is therefore not possible to select the days concerned, but a reservation can run over depending on scheduling options
- **Availability**

- For a dates rule you've to choose the start and end date between which the discount apply. If 'later' the rule applies on the days of the period even if the reservation continues after the period.

Details

- **Type**
- If you set at least an availability, the product selected will be considered unavailable all the time except during the period of availability, other products will remain available unless you choose to apply to all products.
- **Date**
- Beware if the end time is 00:00 select the day following the last day of availability or unavailability. Example, to block the day January 17, 2013 1/17/2013 00:00 as specify the start and end as 18/01/2013 00:00.
- **Quantity**
- Indicate the number of possible reservations on that period

Price Rules

The prices rules let you customize the price calculation of a reservation by applying a discount that can be a percent of the price or an amount. You can choose different types of rules : "Length" let you apply discount depending on the length of the reservation; "Dates" let you apply a discount on a period between two dates; "Recurring" let you apply discount on a certain time slot, on all or some days of the week. You can enable or disable theses rules at any moment.

ID	Name	Type	Family	Product	Price impact	Options	Enabled	Visible	Actions
10	test	Dates	Dressers	All	-10%	From: September 7, 2015 to: September 12, 2015	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Edit
11	none	Dates	All	Robe en mousseline imprimée	+5%	From: September 22, 2015 to: September 23, 2015	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Edit
12	5-day	Length	Shorts	All	-10%	For 5	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Edit

You can create and manage availabilities from the Modules menu > myOwnReservations | Configuration and then in tab Availabilities tab. Press the + button at the top or from the top right corner of the table to create a new availability. It is also possible to do it from the product administration.

Types

- **Length**
- For a length rule you've to choose the minimum and maximal length between which the discount apply. If 'more' checked the rule applies on

the days corresponding to the length range even if the total length of reservation is longer.

- **Dates**
- For a dates rule you've to choose the start and end date between which the discount apply. If 'later' the rule applies on the days of the period even if the reservation continues after the period.
- **Recurring**
- For a recurring rule you can choose all time slots or a specific time slot and all days or a some days of the week for which the discount apply.
- **Delay**
- For a quantity rule you've to choose the minimum and maximal quantity between which the discount apply.

The screenshot shows the 'myOwnReservations' configuration interface for 'Price Rule #2'. The interface is divided into several sections:

- PROPERTIES:** Includes fields for 'Name' (jeudi), 'Product' (All), and 'Enabled' (YES).
- APPEARANCE:** Includes 'Cell color' (#f60027), 'Price color' (#ffffff), and a 'Visibility' checkbox for 'Display as discount'.
- Rule type and Rule options:** A table with four rule types: Length, Dates, Recurring, and Delay. The 'Recurring' rule is selected. Its options include 'Time slot' (All), 'Days' (Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday), and 'Start constraint' (None).
- DID PRICE CALCULATION:** Includes 'Price decrease' (0.0), 'Amount' (if (taxes incl.) 5.0), and 'Scope' (On all reservation price).

Details

- **Name**
- Fill a name that will be visible by the customer
- **Product**
- This parameter let you choose the impact of your discount, you can choose a particular product otherwise it will be applied to ail the products from the product category of general parameters.
- **Enable**

- You can enable or disable the price rule without deleting it. If the price rule is disabled it will not be applied on reservation price calculation.
- **Visible**
- Check visible if you want the discount to be displayed to the customer
- **Impact**
- Choose the type of price calculation, if multiple pricing rules are found they apply in the following order: Rule fixed price with larger bound and the rule of unit price over the relevant period, then the rules increase and reduction.
- **Ratio**
- The ratio give the discount amount as a part of original product price. For instance if you fill 10% and the product cost 150, the discount would be 15.
- **Amount**
- The amount is applicable only once regardless of the length
- **Over All**
- Check to apply the price modification on all reservation instead of the part concerned by the discount rule.

Settings

 - Empty data:** YES / NO (selected)
- SMS ALERT:**
 - SMS Account:** Login: [text area] / Password: [text area] / [Validate]
 - Our SMS Packages:** 250 SMS 0.10€ a SMS / 25.00€ / Ajouter au panier

Details

- **Price display**
- If you choose price unit, the time unit will be added to product prices with a /. If you wish you can display minimum price that means the price for the shorter period that can be selected depending on reservation length.
- **Ignore Transport**
- To ignore the choice of carrier, the TCU should be ignored and default carrier selected.
- **Ignore Address**
- Default customer address will be used
- **Column widget**

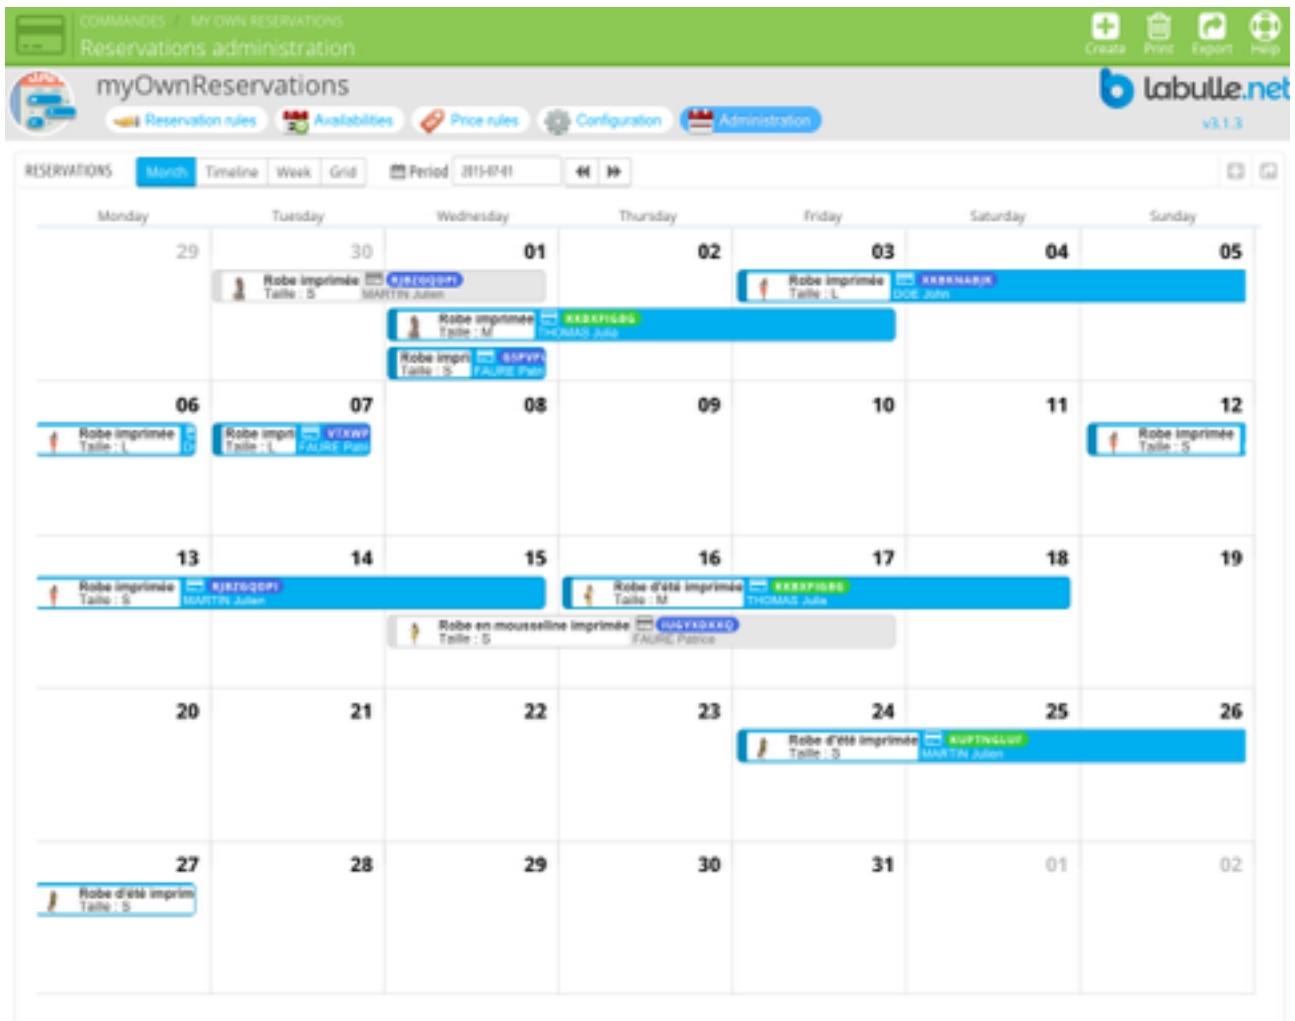

- Show a widget on left or right column to let the user preselect his reservation period. On validation the widget display the products of the reservation category with period price. The selected period is saved in session and let add directly the reservation of products to the cart if they are available.
- **home widget**
- The widget displays the availability of products on a planning on the homepage.
- **Messages**
- Here you can customize messages that are displayed to the customer when reservation is not available due to reservation window constraints or when a reschedule notification is sent by order msg and email.
- **Import**
- The imported file must have the same format as the exported keeping the header row unchanged. Enter an id to 0 to add data. Existing data are not replaced.
- **Empty data**
- Check this option to clear the table before inserting data, this option is useful if you insert all the data simultaneously.

Reservations administration

This chapter explains how to view and handle bookings.

Administration planning

The planning allows to present the reservations so graphic with different views.

The administration schedule is accessible from the Administration tab by configuring the module or via the menu Orders > myOwnReservations

Navigate

The top bar will let you choose the view and change period using date selector or arrows. The schedule is updated every 60 seconds automatically.

Views

Multiple views are offered, each of them presents reservations on distinct lengths.

- **Month**

- The month view lets you view all the booking on a month. The hours of booking are not presented but you can see a book that take several days.
- **Chrono**
- The timeline view don't show details of hours but can list all products on column (including those who have not booking to get an idea of the overall occupancy) and their reservations for 3 weeks.
- **Week**
- The week view allows you to see all weekly bookings with details of hours. Reservations that last all day are on a line on top of the screen.
- **Grid**
- The grid view displays the reservations of a day in more detail in the text. You can sort the results by clicking the column headings.

Export

The button with an arrow on top right of the table or on top of page let you export reservations displayed on the current view to a CSV file.

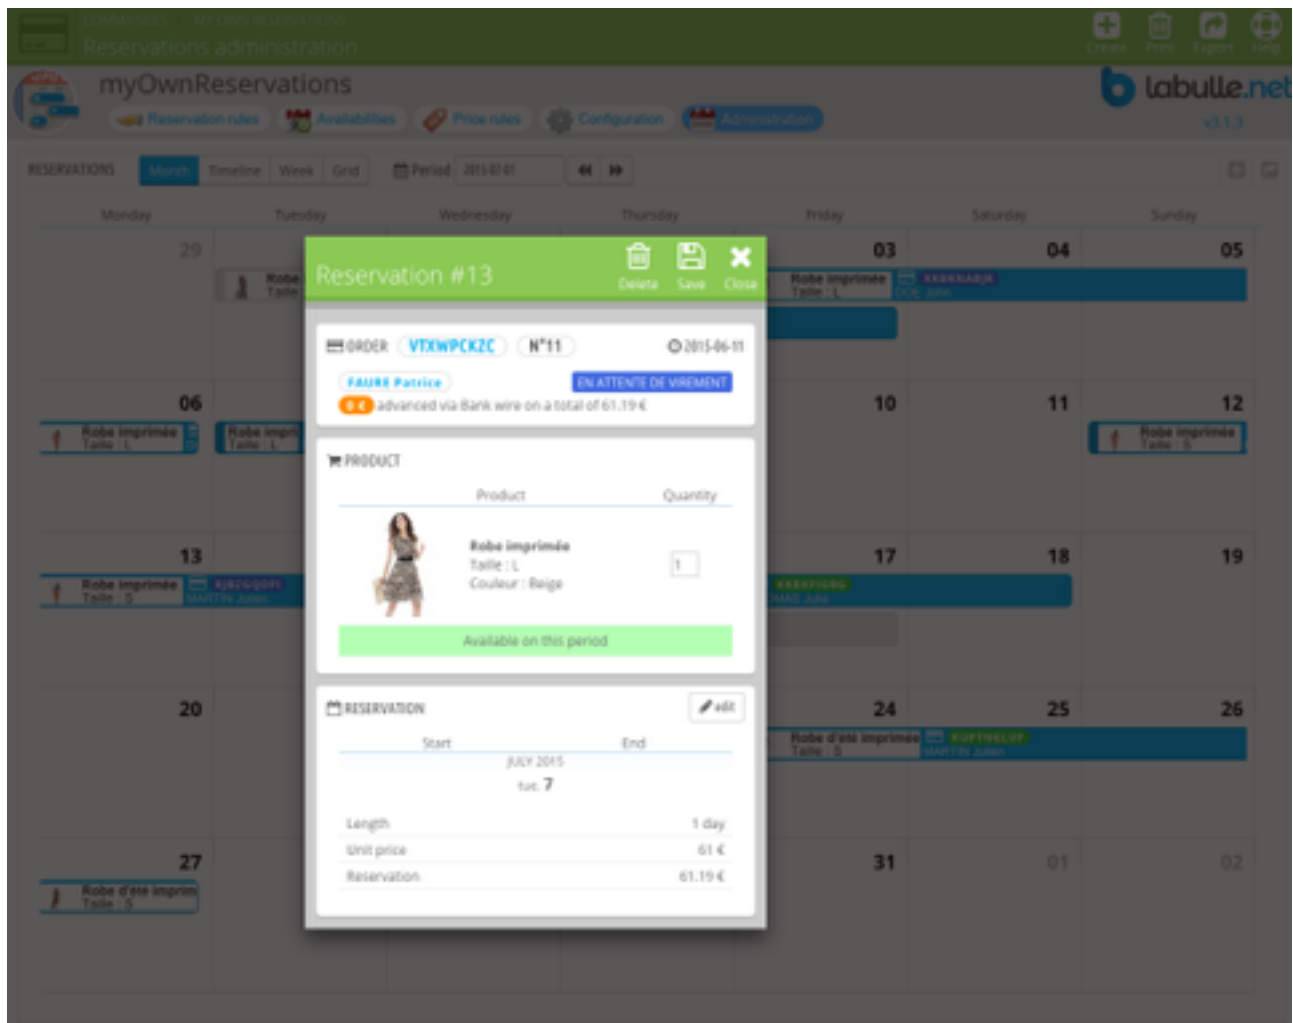

Display reservations

The popup of reservation display can show up from order details and planning.

<div>  Add a product  Add a new discount </div>						
<div>  For this customer group, prices are displayed as: tax included. Merchandise returns are disabled </div>						
					Reservations	23,58 €
					Purchases	0,00 €
					Shipping	0,00 €
					Total	23,58 €

Popup

To view a booking double click on it from the planning or press the button "reservations" to the right of the list of products for ordering details.

- **Order**
- The information of the order to which the reservation belongs are displayed at the top of the window. It is possible to view the order and the customer by clicking the order number and customer name.
- The amount paid and the total amount of the order are displayed, these amounts are different in the case of the use of the advance.
- **Products**
- The middle of the window displays the product associated with the reservation (there can be only one product per booking but with multiple quantities). You can change the quantity but not the product (in this case must be deleted booking and add another). An displayed below the product shows the quantities available for the period (the current reservation is taken into account if enabled). This is made for information purposes, you can overbook the product from the administration..
- **Details**
- The bottom of the window displays the reserved period and the various details: the duration, the unit price, the reductions applied etc ..
- **Modification**

- You can edit the reservation details by clicking on edit button with a pencil icon.

Reservation modification

You can change or schedule a reservation. It is not possible to change the booking but products can change the amount or make a comment

Validate

Reschedule

It is possible to move a reservation by filing sliding from the darker edge. It is also possible to extend a reservation by pulling on the outside edge. The relevant booking window will be opened by highlighting the changes, then click Save to confirm.

- **Period**
- The period is filled with the first day of the order or the day that was clicked on the schedule. The time slot list will be displayed (if working with time slots) and refreshed at each date change.

Comment

You can write a comment on the reservation, this is not visible by the customer.

Refresh

You can choose to update the order to apply the price change.

Create a reservation

It is possible to create reservations for administration module for the handgrip reservation or change of products.

Create

To make a reservation you can press the + button at the top or in the top right corner of the table. It is also possible to click directly on the schedule to the desired start day (and toward the desired time slot in fashion: time will be brought to the early nearest time slot.

The period is filled with the first day of the order or the day that was clicked on the schedule. The time slot list will be displayed (if working with time slots) and refreshed at each date change.

Refresh

You can choose to update the order to reflect the change of price or not.

Import

The import data uses the same format as the exported data, the first column contains the IDs can be deleted: the data will be inserted instead of being replaced. A check box allows you to clear the table before inserting data.

Stock management

With PRO version you can add serial numbers instead of using product quantity. To be used reservation rules product occupation must be set on stock.

The screenshot displays the 'Stock' management interface in the myOwnReservations PRO application. The top navigation bar includes links for 'Reservation rules', 'Time slots', 'Availabilities', 'Price rules', 'Configuration', 'Stock', and 'Administration'. The main content area shows a table of stock items with the following columns: ID, Serial number, Name, Product, Product attributes, On reservation, Customer, Carrier, Advance, and Payment. The table lists various items, including T-shirts and Chemisier, with their respective attributes and reservation status. The 'On reservation' column shows a date range 'From July 1, 2015 To July 2, 2015' for one item. The bottom of the interface includes a 'Bulk actions' button and a 'Display' dropdown menu.

ID	Serial number	Name	Product	Product attributes	On reservation	Customer	Carrier	Advance	Payment
15	000013422955	T-shirt délavé à manches courtes	Taille : M Couleur : Bleu						
14	000023454305	T-shirt délavé à manches courtes	Taille : M Couleur : Bleu						
		T-shirt délavé à manches courtes	Taille : L Couleur : Bleu						
		T-shirt délavé à manches courtes	Taille : L Couleur : Bleu						
3	000146235324	T-shirt délavé à manches courtes	Taille : S Couleur : Orange		From July 1, 2015 To July 2, 2015	Now	My carrier	50 €	Payment by check
13	000023412054	T-shirt délavé à manches courtes	Taille : M Couleur : Bleu						
12	000000234333	T-shirt délavé à manches courtes	Taille : L Couleur : Orange						
		T-shirt délavé à manches courtes	Taille : M Couleur : Orange						
4	000134251332	T-shirt délavé à manches courtes	Taille : S Couleur : Orange						
		T-shirt délavé à manches courtes	Taille : S Couleur : Bleu						
		T-shirt délavé à manches courtes	Taille : S Couleur : Bleu						
		T-shirt délavé à manches courtes	Taille : M Couleur : Orange						
		Chemisier	Taille : L Couleur : Noir						
		Chemisier	Taille : L Couleur : Noir						
		Chemisier	Taille : L Couleur : Noir						
		Chemisier	Taille : M Couleur : Blanc						
		Chemisier	Taille : L Couleur : Noir						
		Chemisier	Taille : M Couleur : Blanc						
		Chemisier	Taille : M Couleur : Blanc						
		Chemisier	Taille : L Couleur : Noir						

The stock view shows a line for each stock item, if the serial numbers are not indicated than a line is generated for each quantity of the product. It can be filtered by product family to have a view of occupation of all products for the current day.

The selection field 'on reservation' allows filtering of beginning or ending reservations that facilitate check-in or check-out.

Add

Click the + button at the top of the table or page to add stock items.

- **Product**
- First select a product in the list, if list is empty that means that no reservation rules occupation are on stock or no product are selected for that rule.
- **Combination**
- You can select a combination if the product have one and if it reservation rule in not on virtual product.
- **History**
- All reservations that have been assigned to this stock element are visible at the bottom of page.
- **Serial**
- Add a line for each serial number. Serial number must have a length of 12 characters maximum and ones with letters cannot be printed as barcode.

Edit

You can click on a stock item to view its details.

The screenshot displays the 'myOwnReservations PRO' web application. At the top, there's a green header with 'MODULES - myOwnReservations - CONFIGURE' and 'Stock item #3'. Below this is a navigation bar with icons for 'Reservation rules', 'Time slots', 'Availabilities', 'Price rules', 'Configuration', 'Stock', and 'Administration'. The main content area shows the details of a stock item. On the left, there's a small image of a person, the text 'T-shirt délavé à manches courtes', and a barcode. On the right, there's a 'DETAILS' section with input fields for 'Name' and 'Comment'. At the bottom, there's a table with columns 'ID' and 'Reservation', showing a single entry with ID '39' and reservation dates 'From: July 1, 2015 To: July 2, 2015'.

- **Details**
- Once created, you can customize the stock item name and add a comment (comment can also be used to track product usury).
- **History**
- All reservations that have been assigned to this stock element are visible at the bottom of page.

Assign

To assign a stock item to a booking, look for the reservation from any view and open it.

It's is a fairly frequent use of that is not complicated to configure with the week selection. Seasonal rates can be configured with period price rules but here many specific prices require the use of tables.

Settings

- **information**
- Several categories corresponding to the destinations are checked and product occupation is on intangible because variations are used for the type of pension, it will therefore take the amount of the default combination.
- **planification**

- Selection is done by week with a week beginning Monday and ending Sunday. The duration is set to 1 to 3 weeks and the rate "from" is displayed.
- **tarif**
- The booking fee uses a table of rates by period for the weeks during the high season are more expensive and vice versa in low season. The deposit is set at 30%.

Hosting

The module can be used for long term rental as furnished rentals or lease credit. The case that concerns us now is renting apartments.

MORE INFO

L'appartement, niché dans un bel immeuble du XVIIIème siècle, auquel on accède par une cour pavée et fleurie, est idéalement situé : dans le périmètre du quartier semi-piéton Montorgueil, à deux minutes de la Place des Victoires. Les multiples solutions de transport à proximité (nœud ferroviaire de Châtelet-les-Halles, lignes 3 et 4 du métro, nombreuses lignes de bus) permettront de se déplacer rapidement dans Paris.

RESERVATION

Start : Wednesday 1st July 2015

End : Sunday 31st January 2016

Change

Add to cart

July 2015	August 2015	September 2015	October 2015

March 2016			
31st Mar 10 740,00 €			

The setup is quite simple because the module will offer full month and the length is not limited. Just remember to set up the deposit.

Settings

- **information**
- The occupation is set to real product because and quantity is fixed at 1.

- **planification**
- The selection is done a month (from 1st to last day of month) on a schedule per year and the window starts at D + 10 for 300 days (because you can take no later than 10 days before the start of the rental).
- **tarif**
- The reservation price is the price of the product without duration and deposit is 100% because it pays only one month for advance. A deposit is set at € 1,000 but is not charged. The status "payment accepted" is checked because it's not necessary to pay the deposit to secure the booking.

Reservation

There are several products corresponding to fixed-term benefits. The customer can reserve multiple slots and slots are shared between products.

Initial setup is fast but the difficulty is against the individuals cases (time slots disabled by product) that you can add with unavailabilities.

Settings

- **information**
- The occupation product type real product because there isn't options, the quantity of each product corresponds to the number of seats per activity.
- **planification**
- The selection is done by time slot is the period is set to 1 in order to allow multiple time slots selections.
- **tarif**
- The reservation rate is the price of the product by the duration in order to multiply the price by the number of selected time slots.

Event

The add-on can be used for the reservation without time for the case of events while the number of seat depends on the date.

11:00pm							

The products are the events that will take place once a day at most and whose schedules are indicated on the product sheet.

Settings

The configuration of this case is simple but requires the creation of availability for each event.

- **information**
- Occupation is set on type "variable" because the number of seats depends on the date.
- **planification**
- The selection is made by day for every day of the week, the duration is ignored. Availability are created to indicate event day for each product. The quantities available are displayed on the schedule. As the duration is fixed we can allow multiple selection.
- **tarif**
- The price of the reservation is the price of the product without length as it is ignored and the deposit is 100%.

Transport

There are special cases such as for transport where you wish to book a different time for departure or return journey.

--------------------------------	---------------------------------	---------------------------------	---------------------------------

Each product is a path which can be a go or a return or a go/return and slots are not the same for go and return.

Settings

The path requires a vehicle with a number of places, if it exceeds a further vehicle is necessary.

- **information**
- The occupation is shared product type and each product can support up to 6 places.
- **planification**
- The selection is not slots and 30 minutes slots are created 8ha 20H starting the slots are on the hour for the start and the other to the end. Time is on no, advanced dual selection option is based on the client.
- **tarif**
- Rate is for reservation, the option to charge double if there are two different dates is checked and the deposit is 100%

Night

The module is well suited for rental of hotels room because he used to count the nights and not days.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
0:00		Oct 20 62,40 € 2 availability	Oct 21 124,80 € 2 availability	Oct 22 187,20 € 2 availability	Oct 23 249,60 € 2 availability	Oct 24 312,00 € 2 availability	Oct 25 374,40 € 2 availability
12:00							
0:00	Monday Oct 26 436,80 € 2 availability	Tuesday Oct 27 499,20 € 2 availability	Wednesday Oct 28 561,60 € 2 availability	Thursday Oct 29 624,00 € 2 availability	Friday Oct 30 686,40 € 2 availability	Saturday Oct 31 748,80 € 2 availability	Sunday Nov 1 811,20 € 2 availability
12:00							

Reservations are billed at night for that : creates 2 half slots one from the arrival to midnight and another from midnight to departure time.

Settings

- **information**
- The product is intangible product such as the declination is used to charge based on the number of people but the amount is blocked at 1 to avoid confusion.
- **planification**
- The selection is made by slot but the duration is unlimited and is counted as day to facilitate price rules. An overview of the price is displayed because the selection is done in two steps.
- **tarif**

- The rate is based on the duration but the duration is counted in days and "Exclude end of the day" is checked to account nights and not days.

Prestation

Products are prestations with varying duration for which you want a proposal to make an appointment.

The cases feature is that the duration of the booking is not on customer choice but depends on the product. And the duration is expressed in number of slots so it must be created with the same periods.

Settings

- **information**
- A specific category is selected as part of the goods are benefits. Product occupation type is virtual product because the products have variations that vary the duration, but not the product that is the same.
- **planification**

- The selection is made by slots of one hour activated from Monday to Friday on a schedule week. The duration is determined by product and by declination.
- **tarif**
- It is the price of the product for the booking because it doesn't depend on length. 1 price rule is created: a time for a 15% discount for bookings ordered one month in advance. Another term price adjusts itself to the 7th day (from 7 to 7 days or more with unit price € 0).

Personalization

Here are the details templates and class files to customize the module

Translation

There are two main types of translation sentences and labels, or dates and times.

First look at the module settings as some labels are customizable directly from the reservation rules or configuration.

Thenr you can edit translations from the back office menu Location> Translation, choose modules translations as the type and the core as theme.

Due to too many problems with the translations dates by the system operation, the translations are done by the module.

To edit translations months or days we must change the class variables myOwnLang starting with \$days or \$months followed by Iso language code in the file classes/lang.php.

Templates

- **admin**
 - pdf.tpl
 - **reservation_display.tpl**
 - *Template to display the book in the popup.*
- **front**
 - **account**
